LetUsCode Systems Pvt. Ltd

Feb 2024 - May 2024

Jaipur, Rajasthan

- Designing, maintaining and building the reusable, efficient and reliable code.
- Developing the service layer that acts a bridge between the presentation layer and data access layer.
- Implementing the design patterns like MVC to improve the performance.
- Assisting in maintaining and updating existing applications and modules.

PROJECTS

PostHub. PostHub is a web platform that allows users to share ideas and blog posts. It uses JSP for the frontend, Java servlets for backend operations, and HTML, CSS, and Javascript for the user interface. Features include signup/sign-in for user authentication, a profile section for managing user information, a blog page displaying user-created posts, and an admin section for managing users and their data through SQL queries.

Chatapp. Chatapp is a window chat application in which the server and clients are connected using the same IP address. Java programming was used for the backend, and ServerSocket technology was employed for the connection. The Swing toolkit was utilized for the graphical user interface (GUI)..

Scrapeyano. It is a Google Maps scraper that extracts data such as names, addresses, phone numbers, and websites. Developed using Django framework and Python language used for backend. The frontend is built with HTML and CSS. Notably, the Playwright library is utilized for automating web browser tasks.
